[Note] 1. In principle, create a table for each undergraduate and graduate school.

2. Classrooms Used refers to the number of classrooms used for official classes by the school, and Total Class Hours refer to all of the courses using lecture halls and seminar rooms amongst the courses taught during the week. The usage rate is calculated as Usage Frequency/Total Class Hours. For example, when there are three “English I” classes that are provided once a week respectively, the total class hours are counted as 3.

3. When a semester system is adopted, and the status of use differs substantially, create a table for each semester.
